Teaching Method	17	22	3		
Instructor's Knowledge of Content	33	8	1		
Projected Usefulness of Content	18	21	2	1	
Objectives of Session Met	21	21			
Appropriateness of Handout Material	5	8	4		23

Did the speaker hold your interest? YES (**38**) or NO (**3**)

Would you recommend this seminar to a fellow land surveyor? YES (**38**) or NO (**1**)

Will you be able to use the information presented in this seminar in the course of your surveying work? YES (**37**) or NO (**1**)

What improvements would you suggest for future seminars? **Advertise for Engineers, Steve Baker talks too fast, additional case studies or real life examples, just continue educating people about the underground law!, handouts so information can be taken back to the office & referenced later, know your audience, make the presentation powerpoints available for those who attended as a refresher & for review, seminar environment control, hand out materials**

What other information programs/seminars would you like to see conducted? _____

Comments: **Good food, especially the pie!, temp consistency & good lunch, great seminar overall, good general knowledge for everyone, all of the speakers were very good speakers, Temperature control in the room was awful all day, "811 for Surveyors" (particularly for mapping) rather than for excavators, seminars where subject matter would qualify for both surveyors and engineers, hard to concentrate during morning session because room temp was so cold**
